

ScreenBeam Mini2 Kit

Mirror Content and Videos from a Windows 7/8 Device to a High-Definition TV, Wirelessly

The ScreenBeam Mini2 Kit wirelessly mirrors all your favorite content and productivity apps from your Windows 7/8 laptop, PC or tablet to a high-definition TV, without a Wi-Fi network or wireless router. The kit contains everything you need to create a wireless point-to-point connection between device and room display. A wireless dedicated connection means no crashing, lag times, and choppy or freezing video, and no need to run cables or drill holes.

Benefits

Beam your favorite videos, photos and movies to the best high-definition display in the house. With ScreenBeam Mini2 Kit it's easy. Simply connect the compact ScreenBeam Mini2 device to a high-definition TV, then plug the ScreenBeam USB Transmitter 2 adapter into your Windows 7/8 device. The adapter enables wireless display from legacy Windows devices that lack native Miracast™ support, the global standard for wireless display. Now sit back and enjoy movies and shows from Netflix, Hulu, Amazon, or YouTube on a big display. Share vacation photos and videos with the entire family, without ever having to huddle around a tiny screen again.

Features

- Mirror your compatible device screen onto a high-definition TV or HD projector wirelessly
- Extend a laptop display to a high-def TV while you work on a main desktop
- Works with legacy Windows 7/8 laptops, PCs or tablets
- Support HDTV with HDMI input
- Does not require existing Wi-Fi router
- Easy setup, everything you need is included
